Revenue Growth but Profit Margin Decline

The following are possible explanations to investigate. They are hypotheses, not confirmed causes.

Hypothesis 1 — Operating expenses increased faster than revenue

Revenue may have increased, but operating costs may have grown at a faster rate, reducing profitability.

Evidence to check:

- Month-on-month revenue growth versus expense growth.
- Monthly expense-to-revenue ratio.
- Expense category trends to identify rapidly increasing costs.

Hypothesis 2 — Payroll and employee-related costs increased

Higher salaries, overtime, bonuses, or additional headcount may have increased total payroll expenses.

Evidence to check:

- Monthly payroll expense trend.
- Headcount changes by month.
- Overtime and bonus records.
- Payroll expense as a percentage of revenue.

Hypothesis 3 — Vendor and service costs increased

Increased vendor payments, service charges, or supplier costs may have reduced the profit margin.

Evidence to check:

- Monthly vendor expense trend.
- Expense category changes over time.
- Top vendor spending comparisons across months.
- Vendor contract changes or invoice increases.
